## PARIS PHOTO 2023

**HUGO DEVERCHÈRE - EVANGELIA KRANIOTI - GABRIEL LEGER**

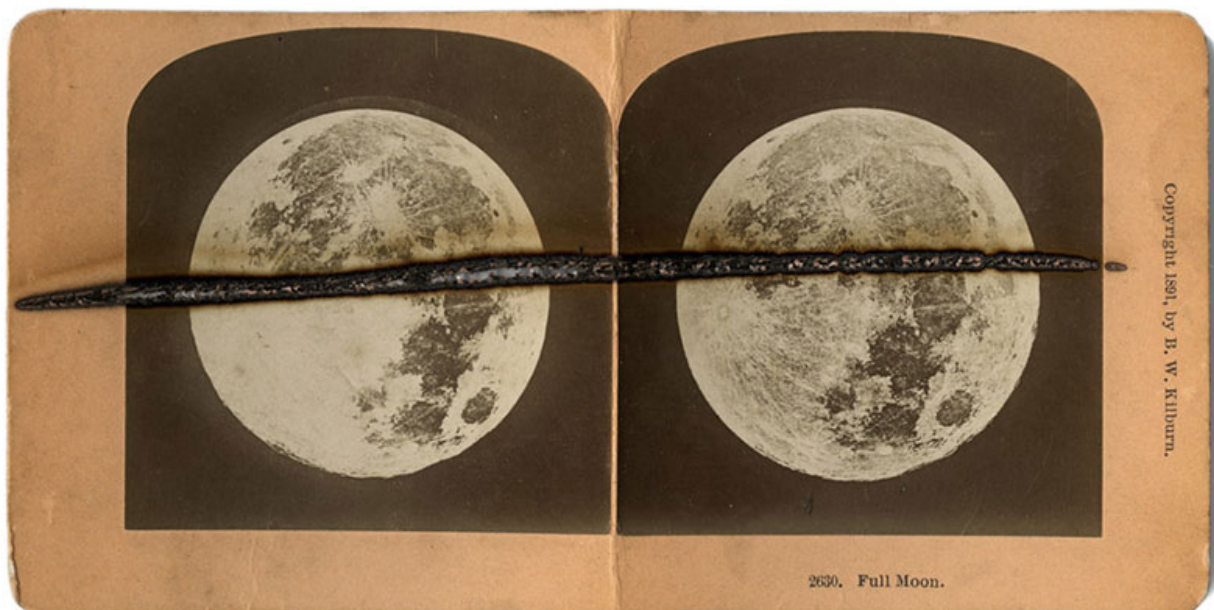

The galerie Sator is pleased to present for Paris Photo 2023 a booth on celestial bodies, exoplanets and stars. The works of **Hugo Deverchère** (born in France in 1988), **Gabriel Leger** (born in France in 1978) and **Evangelia Kranioti** (born in Greece in 1979) will revolve around the notions of spaces to discover and infinite times.

In his photographic prints, **Hugo Deverchère** revisits our desire of exploration and projections of a distance.

From ancient photographs which he burns with a heliograph or associates through matching dates, **Gabriel Leger** creates a dialog nourished by both the ancient and contemporary times, between the stars and the earthly life.

In her series Exotica, erotica, etc, **Evangelia Kranioti** explores our escape and exploration fantasies, from the crossing of the world to the inner journey.

«Message from the stars», also known as Sidereus nuncius, is a treatise on astronomy written by Galileo in 1610. This scientific work was the first to be based on observations made with a telescope. It describes Galileo's first observations of the Moon, the stars and the satellites of Jupiter.
